

Irrigation Pre-Season Service

If your irrigation system hasn't been in use for a few months, these external influences may have caused problems to your system....

- Supply voltage spikes
- Lightning
- Frosts
- Rodents

Get in before the rush to ensure your system starts, first time.

Don't miss the start of the irrigation season with a simple avoidable issue. Want to start your irrigation on your own terms?

Ensure your system is ready to go first time when you need it.

What we check:

- Overall site and electrical equipment condition.
- Clean switchboard inside and out.
- Electrically test irrigation motor.
- Electrical terminations checked and tight.
- Correct settings are stored.
- Check for frosted equipment, pressure switches, gauges and transducers.
- Control switches, buttons and fault lights are operational.
- Run the system and check safety systems are operational
 - Running current and voltage
 - Power factor (if applicable)
 - Fans (if applicable)
 - Hour meters and run lights

What we do:

- Build a history of the site and possibly detect problems before they occur.
- Build a log of settings and adjustments over time.
- Carry out any simple/urgent repairs on site.
- Note any non urgent and advise repairs in our full pre-season report (this work can be quoted for repair if required).

We can also offer...

- Thermal image inspection and reporting.
- We can arrange a service of your VSD to keep it running and extend its lifespan.

Communication throughout the site inspection, from initial contact, as we go. Minor issues and major problems that need attention repaired. Full report supplied on completion.
